Hi Sam and class,

Please see my solution attached.

I've created console application, to run it you have to:
1. Compile using javac;
2. Then run app like: java W06DQ1AppRunner 10
This will generate 10 random integers, display them and display only even of them.

Example app output:

```
Randomly generated array of size 5:
    [1723364134, -1989684067, 229828165, 195920325, -1898338704]
Even numbers:
    [1723364134, -1898338704]
```

With best,
Val
